

Regarding the planned 2016 reconstruction of the 500 block of East McKinley Street between Jackson Street and Lawe Street:

The residents of the 500 block of East McKinley would prefer that the street not be reconstructed but, instead, simply patched after it undergoes the proposed underground work.

We recognize that this may not be the most aesthetically pleasing option, but our access needs would be more than adequately met, and the current width of the road would be maintained without the loss of the trees.

Additionally, far from being beneficial, the proposed reconstruction would be detrimental to us; the cost of the special assessments levied against us would cause financial harm while at the same time our property values would not increase due to the street reconstruction.

For these reasons we, again, request that the 500 block of East McKinley Street not be reconstructed but, instead, simply be patched.
