I appreciate the waiver and your review of this information. I will admit that the feeling of panic is no longer there as I now understand the intention of the revaluation and its consequences. I certainly support the initiative and understand the objective of having a fair tax base.

Nevertheless, as a result of my unfounded panic, I did review the figures in detail and focused mainly on houses in my neighbourhood. My only objection/request remaining is that the assessment seems inconsistent based on square footage and improvements. One of the houses has a similar assessment yet it is far larger, has a pool and a fully finished basement (shaded in light orange). My house has a partially finished basement - most, if not all houses in the neighbourhood have finished basements. There is one house with similar square footage with a much lower assessment (shaded in light green).

Based on the information provided above, I hope you adjust the assessment of my house to around \$380,000
