Appleton, WI 54911

Subject: Invoice for electric line extension E. Milis Drive, Appleton

Dear Mr. Rehbein:

Thank you for your application for new electric facilities. Please review the following information.

Cost Details:

- The cost for this project will be \$24,384.94. Additional charges may apply if we encounter unusual conditions, delays in your construction schedule or other changes that you request.
- Additional charges will apply if installation is requested from Dec. 1 through March 31.
- The cost does not include electric service to sewer lift stations, community well pumps, lighting, etc.
- Please advise potential lot buyers that additional charges may apply for service to their building.
- Installation cost must be paid in advance of construction.
- If an additional cost estimate is needed within 12 months, there will be a charge for preparing the new estimate.
- This cost is valid for 90 days provided this letter and enclosed drawing are signed and returned with payment, the site is ready, and all other requirements are met.

Payment Remittance:

Remit payment, if applicable, using one of the following options. Reference the work request number shown below on your check or when paying via phone or online.

- Personal check.
- Online at www.we-energies.com/payconstructionbill.
- Phone at 855-570-0998.

Refund details:

- You may be entitled to a partial refund for each meter connected to these facilities within five years of the energized date.
- Refunds will not exceed the amount of the original cost.

Facility Location:

- To avoid damage to underground facilities, you are responsible for locating and marking (with stakes, spray paint or flags) any buried obstructions and private underground facilities like lighting, septic systems, wells, sprinkler systems, etc.
- It is very important that you mark these facilities as We Energies and/or its agents are not responsible for damage to your facilities that are not properly marked before our work begins.

Construction:

Please consider this information when developing your project timeline:

- Once all job requirements are met, allow us a minimum three-week lead time for scheduling the installation of electric facilities.
- The area along the route of our facilities must be graded to within four inches of final grade. Fill, if deeper than three feet, must be compacted prior to the installation of our facilities. If relocation or repair of our facilities becomes necessary because of a grade change greater than four inches, you will be billed the full relocation or repair costs.
- Easements to install and maintain all We Energies facilities, including the right to cut out brush, shrubs and trees, must be provided.
- Lot line stakes are required along the proposed route.
- Streets should not be paved or sealed prior to the installation of our facilities.

Surface Restoration:

- Surface restoration in the public right-of-way, for facilities installed beyond your project limits, will be completed according to municipal guidelines.
- Restoration within your development will include backfilling and compacting using existing soil.
- All cut brush, shrubs and trees will be left at the site along our trench route.

As a reminder, you need to return the signed invoice and signed drawing along with your payment. Sign and return the enclosed Grade Verification Form only after its provisions have been met. If you have any questions, please call me. I look forward to working with you to make your project a success.

Sincerely,

Stacy Czajkowski
Energy Services Consultant

P.S. For more information on the application and construction process for new developments, visit www.we-energies.com/builders-contractors.

Enclosure

GRADE VERIFICATION FORM

Establishing the final grade on your property is necessary prior to the installation of We Energies underground facilities. To ensure public safety, state and national codes require us to install our facilities at certain depths. If relocation or repair of our facilities becomes necessary because of a grade change greater than 4 inches, you will be billed the full relocation or repair costs.

Project Details

Development Name: City of Appleton on E. Milis Drive
Municipality: City of Appleton
Work Request #: 3850159

AUTHORIZATION: I certify that I am the owner, or authorized representative of the owner, of the aforementioned development and that the entire route in which We Energies underground facilities are to be installed is within 4 inches of final grade. I agree that I, or the owner of the property, will pay for any relocation or repair costs incurred by We Energies due to grade change in excess of 4 inches.

WE ENERGIES WORK REQUEST ENVIRONMENTAL NOTES (Notes 1 through 7 apply to ALL work requests)

General
 1. If WDNR and/or USACE permits were obtained for the project, all permit conditions shall be met during construction of the project.
Erosion Control
 2. If soil disturbance occurs on slopes or channels/ditches leading to wetlands or waterways, or within wetlands, the disturbed areas shall be stabilized and appropriate erosion control Best Management Practices (BMP's) shall be implemented.
 3. Erosion Control BMP's shall meet or exceed the approved WDNR Storm Water Management Technical Standards (http://dnr.wi.gov/topic/stormwater/standards/const_standards.html). Refer to We Energies Construction Site Sediment and Erosion Control Standards.
 4. Inspect installed erosion control BMP's at least one time per week and after 1/2" rain events; repair as necessary.
 5. When temporary stabilization is required (e.g. for writer or short-term construction) prior to final restoration, soil stabilizer shall be installed wherever possible. Erosion mat shall be used temporarily only where appropriate, in accordance with state standards, and when approved by the Operations Supervisor.
Contaminated Soils
 6. Whenever soil exhibiting obvious signs of contamination (e.g., discoloration, petroleum or solvent odor, free liquids other than water, buried containers or tanks, or other obvious signs of environmental impacts) is encountered during excavation or installation, cease work immediately, take appropriate immediate precautions to ensure worker health and safety, and contact the Operations Supervisor or Inspector.
Spills
 7. If an oil spill occurs during construction, call the Environmental Incident Response Team (EIRT) at 414-420-3478:
 a. Any quantity of oil or oil is spilled into surface water;
 b. Any oil spill greater than 50 ppm PCB into a sewer, vegetable garden, or grazing land;
 c. Any oil spill containing greater than 500 ppm PCB;
 d. Five gallons or more of oil spilled to the ground;
 e. Any oil spill involving a police department, fire department, DNR, or concerned property owner.

WE ENERGIES WORK REQUEST ENVIRONMENTAL NOTES (Notes 1 through 7 apply to ALL work requests)

Notes 8 through 27 apply as noted at specific points within each work request:
Dewatering
 8. Dewatering of pits or trenches shall be done in accordance with state standards. Use an approved sediment bag, a straw bale dewatering basin, a combination of both, or equivalent.
Wetlands
 9. As much as practicable, the majority of the work shall be staged from the public roadways and road shoulders, keeping equipment out of adjacent wetlands.
 10. All work shall be conducted to minimize soil disturbance. No rutting will be allowed within the wetlands.
 11. If soils are not frozen or stable to a point that avoids rutting, timber mats, mud tracks, or equivalent shall be utilized to access pole locations.
 12. Excavated soils cannot be stockpiled in wetlands.

WE ENERGIES WORK REQUEST ENVIRONMENTAL NOTES (Notes 1 through 7 apply to ALL work requests)

Waterways
 13. All excess spoils shall be removed from wetlands and placed in a suitable upland location.
 14. Trenching and pit excavations within wetlands shall include soil segregation to facilitate restoration of pre-construction soil stratification, and restoration to pre-construction elevations.
 15. Poles scheduled to be removed, and that occur within wetland, shall be cut at the ground surface.
 16. No work can be performed within the banks or below the ordinary high watermark of any navigable waterways/streams.
 17. No crossing of navigable waterways with equipment can occur. Foot traffic is allowed.
 18. Any disturbed soil within 75-feet of the ordinary high water mark of any navigable waterways/streams shall be stabilized within 24 hours of construction completion.
Threatened and Endangered Species
 19. Threatened or endangered species are known to occur in the work area. It is illegal to harass, harm, or kill a protected species under state and federal regulations. Proper precautions shall be taken to ensure harm to individuals is avoided.
 20. In order to protect the threatened or endangered species, work must be conducted between November 5 and March 15.
 21. Exclusion fencing must be installed at the work area prior to March 15.
 22. A qualified biologist must be present when conducting work at this location.
Invasive Species
 23. State regulated invasive species are known to occur in the work area. Reasonable precautions are legally required to prevent the spread of these species. The Wisconsin Council on Forestry Transportation and Utility Right-of-Way Best Management Practices should be followed: (<http://council.wisconsinforestry.org/invasives/transportation/>).
Cultural and Historical Resources, cont.
 24. The project is within or adjacent to an area that is identified by the State of Wisconsin as potentially having Native American artifacts, burial mounds or burial sites, which could be encountered during construction.
 25. If human bone or any artifacts are discovered during construction, work must cease immediately. Contact the Environmental Department who will contact the State Burial Sites Preservation Office and determine the next steps that must be taken in order to comply with state law. Work at that site MAY NOT PROCEED until the Environmental Department authorizes it.
 26. A "qualified archaeologist," as specified under Wis. Stats 157.70 (1) (i) and Wis. Admin. Code HS 2.04 (6), must be present to monitor all ground disturbing activities.

WE ENERGIES WORK REQUEST ENVIRONMENTAL NOTES (Notes 1 through 7 apply to ALL work requests)

Frac-out Contingency Plan
 27. A frac-out contingency plan shall be on-site and implemented accordingly. The contingency plan shall incorporate the following components.
 a. Continuously inspect the bore paths for frac-outs in order to respond quickly and appropriately.
 b. Containment materials (e.g. silt fence, straw bales, sand bags, etc.) shall be on site and available should a frac-out occur.
 c. A vac truck shall be accessible on short notice in order to respond quickly to a frac-out.
