Terms & Definitions

Common Terms in Public Health

Barriers to Care Barriers to receiving needed health care can include cost, language or knowledge barriers, and structural or logistical factors, such as long waiting times and not having transportation. Barriers to care contribute to socioeconomic, racial and ethnic, and geographic differences in health care utilization and health status.

mchb.hrsa.gov/whusa11/hsu/downloads/pdf/303bcunc.pdf

Community Health Community health is a field within public health concerned with the study and improvement of the health of biological communities. Community health tends to focus on geographic areas rather than people with shared characteristics.

dictionary.reference.com/browse/community+health

Data Data are factual information (as measurements or statistics) used as a basis for reasoning, discussion, or calculation. Information in numerical form that can be digitally transmitted or processed.

merriam-webster.com/dictionary/data

Environmental Public Health Environmental health is the science and practice of preventing human injury and illness and promoting well-being by: identifying and evaluating environmental sources and hazardous agents; and limiting exposures to hazardous physical, chemical, and biological agents in air, water, soil, food, and other environmental media or settings that may adversely affect human health.

neha.org/pdf/positions/NEHA_Adopted_EH_Definition_July_2013.pdf

Epidemiology Epidemiology is the study of the distribution and determinants of health conditions or events among populations and the application of that study to control health problems.

Centers for Disease Control and Prevention (US). Principles of Epidemiology in Public Health Practice, 3rd ed. No date [cited 2012 Nov 6]

Health Disparities Health disparities are differences in population health status (incidence, prevalence, mortality, and burden of adverse health conditions) that can result from environmental, social and/or economic conditions, as well as public policy. These differences exist among specific population groups in the United States and are often preventable.

Adapted from: National Association of County and City Health Officials (US). Operational Definition of a Functional Local Health Department [online]. 2005 [cited 2012 Nov 8]. Available from URL http://www.naccho.org/topics/infrastructure/accreditation/OpDef.cfm. National Cancer Institute (US). Health Disparities Defined [online]. 2010 [cited 2012 Nov 8] http://crchd.cancer.gov/disparities/defined.html

Health Equity Health equity is the attainment of the highest level of health for all people. Achieving health equity requires valuing everyone equally with focused and ongoing societal efforts to address avoidable inequalities, historical and contemporary injustices, and the elimination of health and healthcare disparities.

Terms & Definitions

Common Terms in Public Health, continued

Health Inequity Health inequity refers to differences in population health status and mortality rates that are systemic, patterned, unfair, unjust, and actionable, as opposed to random or caused by those who become ill.

Margaret M. Whitehead, "The Concepts and Principles of Equity and Health," 22(3) International Journal of Health Services (1992): 429-445.

Practice-based Evidence is the incorporation of evidence grounded in cultural values, beliefs, and traditional practices.

Public Health Accreditation Board. Standards and Measures Version 1.5. Alexandria, VA, May 2011

Prevention Primary prevention consists of strategies that seek to prevent the occurrence of disease or injury, generally through reducing exposure or risk factor levels. These strategies can reduce or eliminate causative risk factors (risk reduction). Secondary prevention consists of strategies that seek to identify and control disease processes in their early stages before signs and symptoms develop (screening and treatment). Tertiary prevention consists of strategies that prevent disability by restoring individuals to their optimal level of functioning after a disease or injury is established.

(Turnock. Public Health: What It Is and How It Works (4th Ed). Jones and Bartlett. MA. 2009)ants of health [online]. 2012 [cited 2012 Nov 7].http://www.who.int/social_determinants/en/

Primary Data Primary data are data observed or collected from original sources, ranging from more scientifically rigorous approaches such as randomized controlled trials to less rigorous approaches such as case studies.

www.nlm.nih.gov

Secondary Data Secondary data are those data which have been collected in the past, collected by other parties, or result from combining data or information from existing sources.

www.nlm.nih.gov/nichs

Social Determinants of Health Social determinants of health are the conditions in which people are born, grow, live, work and age, including the health system. These circumstances are shaped by the distribution of money, power and resources at global, national and local levels. The social determinants of health are mostly responsible for health inequities – the unfair and avoidable differences in health status seen within and between countries.

(World Health Organization (Switzerland). Health Topics: Social determinants of health [online]. 2012 [cited 2012 Nov 7].http://www.who.int/social_determinants/en/

Letter from the Director

Appleton friends and neighbors,

Over the past year Appleton opened a remarkable conversation about health. We heard from more than a thousand residents in six languages, gathering perspectives everywhere from senior-center lunches to college commons, from neighborhood parks to emergency shelters. Your stories, paired with local, state, and national data, became our 2025 Community Health Assessment (CHA).

The narrative that emerged is clear and compelling. First, money matters. A single missed paycheck could topple roughly one-third of Appleton households, illustrating how financial strain seeps into every corner of well-being. Home matters as well. Fewer than four in ten residents believe safe, affordable housing is truly within reach, reminding us that health begins where we live and sleep. Connection matters, too. Nine out of ten respondents perceive unmet mental-health needs, and a growing share describe feeling isolated even among our busiest neighborhoods. Finally, equity matters. Health outcomes still diverge along lines of race, income, language, ability, sexual identity, and gender, underscoring that inequity is not an abstract concept but a daily reality that costs many the opportunity to thrive.

Because these themes echo across county lines, those insights are already woven into the Tri-County Community Health Assessment that will anchor a single regional Community Health Improvement Plan (CHIP) for Calumet, Outagamie, and Winnebago Counties. Appleton's data will sit shoulder-to-shoulder with findings from our neighbors as we draft a regional CHIP. This spring residents from all three counties will rank shared priorities. By fall, we will publish goals, metrics, and accountability measures that belong to the entire Fox Cities area. Each year we will report back, celebrating progress and recalibrating where needed.

You can help keep this story moving. Watch for upcoming forums, lend your expertise, and continue everyday acts that strengthen the social fabric—checking on a neighbor, volunteering, or advocating for policies that make housing and health care affordable. Together we will transform these findings into action and write the next chapter in a healthier, more equitable Appleton—and Tri-County region.

Dr. Charles E Sepers, Jr, PhD, MPH Health Officer | Director

Methodology

Purpose: What is a Community Health Assessment?

Every five years, local health departments are statutorily required to conduct a Community Health Assessment to better understand the assets and needs of their community. A Community Health Assessment (CHA) is a look at the health status and needs of a community. It involves gathering, analyzing, and interpreting data about health, including demographics, health behaviors, access to healthcare services, environmental factors, and social determinants of health.

The primary goal of a CHA is to identify the health priorities, strengths, and challenges within the community. This informs decision-making processes, resource allocation, and interventions aimed at improving health outcomes and promoting equity.

Approach: What does the CHA involve?

Steering Committee

The steering committee for Appleton's Community Health Assessment was intentionally asked to represent a diverse set of stakeholders that represent critical sectors within the community. Those asked to join the committee, and those who accepted, are experts within a few key areas we wished to have represented in our assessment: children; youth; families; cultural diversity; and mental health.

Steering Committee				
Kayla McNamara	Boys & Girls Club of the Fox Valley	Children; Youth; Families; Cultural Diversity		
Laura Jackson	Appleton Area School District	Children; Youth; Families		
Kenny Yarborough	Lawrence University	College; Cultural Diversity		
Wendy Krueger	United Way Fox Cities	Non-Profit; Fundraising		
Megan Zimmerman	NAMI Fox Valley	Non-Profit; Mental Health

Breanna Mekuly	Breanna Mekuly Appleton Health Department			
Jena McNiel	Appleton Health Department Local Health Department			
Sonja Jensen	Appleton Health Department	Local Health Department		
Chuck Sepers	Appleton Health Department			

Data Included

Appleton's CHA includes primary and secondary data. Primary data comes from a survey conducted by Appleton's Community Health Assessment Steering Committee. Secondary data is data available from other sources that is selected by staff of the Health Department.

Methodology

The Survey

The Steering Committee developed Appleton's Community Concerns Survey using a model from the Community Tool Box, created by the Center for Community Health and Development at the University of Kansas. The committee also reviewed similar surveys from the Fox Valley region and considered feedback from those efforts. The goal was to build on existing data—such as from the Mind Your Wellness and Imagine Fox Cities surveys—by asking more specific questions about the challenges and strengths experienced by people who live, work, and play in Appleton.

The survey was available from March 1 to August 31, 2024, both online and in paper form. It was open to anyone who lives, works, or spends time in Appleton. In total, 1,291 people responded, including 1,080 Appleton residents—about 84% of total responses.

To improve access, the survey was translated into the six most commonly spoken languages in the Appleton area, based on data from the Appleton Area School District. Those languages include: English, Spanish, HMong, Kinyarwanda, Swahili, and Dari/Farsi. Paper copies in each language were made available at the Appleton Public Library. Translated versions were also shared directly with local organizations, such as Casa Hispana and the Hmong American Partnership. A special session at Long Cheng Market—where many Hmong elders and their families gather—helped elders complete the survey in Hmong.

In-person support sessions were also held at several community locations, including:

- Lawrence University
- Eagle Point Senior Living Community
- Oneida Heights (Appleton Housing Authority)
- City of Appleton's Citizen Academy
- Riverview Gardens (job training site)
- Salvation Army (during free lunch service)

At these sessions, participants could choose to complete the survey on paper or using an iPad—whichever was easier. In some cases, Health Department staff read the questions aloud and helped participants select their answers.

To increase awareness, the Health Department launched a social media campaign featuring local leaders sharing why participating in the Community Health Assessment matters. Posters and banners were also placed around Appleton in high-traffic areas like the Thompson Center (a senior activity center) and Appleton Park & Rec's Dance Studio (where parents often wait during children's programs).

Survey responses to statements were analyzed using a quadrant method, which looked at both how strongly people agreed with a statement and how important they believed it was. This two-part approach helped the committee identify which issues should be prioritized—especially those that were both widely agreed upon and considered highly important. For more details, see Appendix C.

Secondary data

The secondary data used in this Community Health Assessment (CHA) comes from a variety of trusted sources. Local data includes findings from projects such as Imagine Fox Cities, the Mind Your Wellness survey, the Appleton Police Department's Fall 2023 survey, and the Fox Cities Point-in-Time Count.

State and national data was gathered from reliable sources like the Wisconsin Department of Public Instruction, the U.S. Census, County Health Rankings, and United for ALICE (Asset Limited, Income Constrained, Employed), among others. For a full list of sources and links to more information, please see the References section.

Frameworks & Models

THE 10 ESSENTIAL PUBLIC HEALTH SERVICES

To protect and promote the health of all people in all communities

The 10 Essential Public Health Services provide a framework for public health to protect and promote the health of all people in all communities. To achieve equity, the Essential Public Health Services actively promote policies, systems, and overall community conditions that enable optimal health for all and seek to remove systemic and structural barriers that have resulted in health inequities. Such barriers include poverty, racism, gender discrimination, ableism, and other forms of oppression. Everyone should have a fair and just opportunity to achieve optimal health and well-being.

ESSENTIAL PUBLIC HEALTH SERVICE #1 Assess and monitor population health status, factors that influence health, and community needs and assets

ESSENTIAL PUBLIC HEALTH SERVICE #2 Investigate, diagnose, and address health problems and hazards affecting the population

ESSENTIAL PUBLIC HEALTH SERVICE #3 Communicate effectively to inform and educate people about health, factors that influence it, and how to improve it

ESSENTIAL PUBLIC HEALTH SERVICE #4 Strengthen, support, and mobilize communities and partnerships to improve health

ESSENTIAL PUBLIC HEALTH SERVICE #5 Create, champion, and implement policies, plans, and laws that impact health

ESSENTIAL PUBLIC HEALTH SERVICE #6 Utilize legal and regulatory actions designed to improve and protect the public's health

ESSENTIAL PUBLIC HEALTH SERVICE #7 Assure an effective system that enables equitable access to the individual services and care needed to be healthy

ESSENTIAL PUBLIC HEALTH SERVICE #8
Build and support a diverse and
skilled public health workforce

ESSENTIAL PUBLIC HEALTH SERVICE #9
Improve and innovate public health
functions through ongoing evaluation,
research, and continuous quality
improvement

ESSENTIAL PUBLIC HEALTH SERVICE #10
Build and maintain a strong
organizational infrastructure for
public health

Frameworks & Models

Social Determinants of Health

Social Determinants of Health (SDOH) are the social and environmental conditions that influence health. They include the conditions in which people are born, grow, work, live, play, and age. SDOH also include the broader forces and systems that shape everyday life conditions. SDOH have a major impact on people's health, well-being, and quality of life.

These things contribute to the health & well-being of all people:

CDC, Public Health Professionals Gateway

Frameworks & Models

Healthy People 2030

Healthy People 2030 sets data-driven national objectives to improve health and wellbeing over the next decade. It's part of the United States Department of Health and Human Services along with the Office of Disease Prevention and Health Promotion.

National Objectives to Improve Health & Wellbeing

Healthy People 2030 objectives help measure our nation's progress in critical areas of public health — and serve as a reliable data source to support organizations and individuals working to improve health and well-being for all.

Health Equity

Prioritizing health equity means creating fair opportunities for everyone to achieve their best health. The National Association of County and City Health Officials (NACCHO) suggests using MAPP 2.0 as a framework for community health assessments and improvement plans. MAPP 2.0 stresses the importance of looking at "Mechanisms of Power" to better understand health equity.

Leading Health Indicators

Healthy People 2030 includes 23 Leading Health Indicators (LHIs), high-priority objectives that address major public health issues — from obesity to substance use to chronic disease prevention and more.

Health Disparities

Healthy People 2030 includes health disparities data for populationbased core objectives with available demographic group data. Health disparities are differences in health that are closely linked to social determinants of health. Addressing health disparities is key to achieving health equity and realizing the Healthy People vision of improving the health and well-being of all.

Evidence-based Resources

Evidence-based resources (EBRs) are published reviews of intervention evaluations and studies to improve health. We've organized them into intuitive topics so you can easily find what you're looking for. Pick a topic you're interested in and explore relevant resources that can help you work to achieve Healthy People 2030 objectives.

feel isolated from others

they are much more likely to know how to access

mental health care than those who make less than \$150,000 a year

Employment

Meaningful Work

Meaningful work with a family-sustaining wage promotes financial stability, reducing stress and improving mental health while ensuring access to basic needs. Stable employment also supports overall community well-being by decreasing health disparities and fostering healthier lifestyles.

Labor Force Unemployment

Family-Sustaining Wages

A family-sustaining wage is the income level necessary for a worker to meet their family's basic needs, including housing, food, healthcare, childcare, transportation, and other essential expenses, without relying on public assistance. It varies based on factors like family size, location, and cost of living.

Percent of the population ages 16 and over that are in the labor force

According to Community Concerns Survey respondents, the following impact Appleton residents' ability to keep or move up in a job:

*The labor force includes civilians who are employed or unemployed but actively seeking employment, and members of the US Armed forces.

"Work, life and family balance. Moving up in a position requires more time commitment to a job. The increase in responsibilities doesn't work well for my life and family right now."

-Community Concerns Survey Participant

Annual Income

Higher Income is Associated with Better Health Outcomes

Higher income is associated with better health outcomes because it provides greater access to quality healthcare, nutritious food, safe housing, and educational opportunities. These promote overall well-being. Additionally, higher income reduces stress and financial strain, leading to healthier lifestyles and improved mental health.

Household Income Based on Education

Higher levels of education are linked to better income opportunities, which can lead to improved health outcomes and greater access to resources that support well-being.

Income Disparities

The percentage of women's median earnings to men's median earnings for all full-time, year-round workers has continually decreased in the last three years.

Women's EarningsMen's Earnings

D24 in Appleton's three counties

In 2024 in Appleton's three counties, women are paid \$0.786 for every \$1.00 men are paid.

County Health Rankings

The following demonstrates the **extra number of days a woman must work** to equal the average annual salary of a white man in the US **I**

Women must work months longer to make the same amount white men make in one year

Factors Contributing to the Gender Pay Gap

Job Segregation

Women-dominated fields are lower-paid, even when they require the same level of skill, education, and training. These jobs are also less likely to offer benefits like paid time off, health insurance, and retirement plans.

Motherhood Penalty

Because caregiving responsibilities fall disproportionately on mothers, women are more likely to take time out of the workforce or scale back hours which can limit or postpone career advancement and corresponding pay increases.

Discrimination

Despite federal protections against workplace discrimination, LGBTQ+ people continue to experience bias and discrimination in all stages of employment.

AAUW: The Simple Truth Gender Pay Gap 2025

The earnings lost as a result of the pay gap have meant women have had fewer opportunities to make ends meet, let alone save for emergencies or retirement.

County Health Rankings: Findings & Insights on the Gender Pay Gap

Gender Pay Gap Health Outcomes

Opportunities

Lower incomes mean fewer opportunities to live in safe housing, buy nutritious food, and obtain quality education - all factors that contribute to health.

Physical Health

Gender pay inequities are associated with worse mortality outcomes, poorer self-rated health and increased disability.

Gender pay inequities lead to higher rates of stress, anxiety and depression.

Poverty

Closing the gender pay gap would reduce poverty among women, especially women of color, which would improve their long-term health.

An economist explains why women are paid less | World Economic Forum County Health Rankings: Findings & Insights on the Gender Pay Gap

Cost of Living

Cost of living is the amount of money needed to live a standard quality of life in a specific location at a specific time. That means that where you live, and year to year the cost of living can be very different. Cost of living usually takes into account, cost of shelter, transportation, food, utilities and healthcare. US Dept of Labor: World Populations Review, Cost of Living Index by State

89%

Is Living in Appleton Affordable?

Community Concerns Survey (percentages of survey responses based on income level)

"I feel Appleton is a great city to live in [but] I feel the expenses of living here are getting out of control. I'd hate to move out of the city but cheaper options will have to be considered if the prices keep going up (taxes, shell tax, etc) as my income doesn't keep going up."

Community Concerns Survey Participant

According to Community Concerns survey respondents,

15% of Appleton households struggle to pay for basic needs

such as: food, clothing, housing, transportation, childcare, etc.

Making Hard Choices

Financial strains and worries play significant roles in mental health. Worries about personal health and financial security are related to higher levels of psychological distress, anxiety and depression. This in turn has a negative impact on health behaviors and outcomes (heart disease, reduced immune response, mortality), as well as overall family well-being.

The Relationship Between Financial Worries and Psychological Distress Among US Adults, PMC

Financial Stress

Financial stress can negatively impact overall health and wellbeing by increasing anxiety, depression, and chronic stress, which can contribute to high blood pressure, heart disease, and weakened immune function. It can also lead to poor health behaviors, such as unhealthy eating, lack of exercise, and delaying medical care due to cost concerns. roughly

Negative Net Worth

How Debt Affects Health

Debt can lead to chronic stress, which negatively impacts mental health and increases the risk of anxiety and depression. It can also cause people to delay or avoid necessary medical care due to financial strain. Over time, the constant pressure of debt can harm physical health, weaken social relationships, and reduce overall quality of life.

Persons Below Poverty Line

What is the poverty level?

Federal poverty levels are used to determine eligibility for certain programs and benefits, including savings on Marketplace health insurance, and Medicaid and Children's Health Insurance Program coverage.

HealthCare.gov Glossary: Federal Poverty Level

Persons below poverty level

In Appleton, 12% of children under the age of 18 years old are living under the poverty line. In Appleton 7% of seniors over the age of 65 are living under the poverty line.

The Benefits Cliff

The "benefits cliff" represents the loss in benefits from public programs due to marginal increases in earned income. This loss may make the family worse off in terms of net resources despite the increase in earnings.

The benefits cliff mostly impacts individuals and households at or near the poverty level who are eligible for – but may not be receiving – multiple government programs. Recent research indicates that families with children often require an income up to three-and-a-half times the Federal Poverty Level in order to adequately cover the basic needs and living expenses for Quote from a family.

Persons Above Poverty Line but Struggling

ALICE = Asset Limited Income Constrained Employed

The Asset Limited Income Constrained Employed (ALICE) threshold represents households that are above the poverty level, but do not have enough to afford the basics of housing, childcare, food, transportation, healthcare, and technology, plus taxes and a contingency fund (miscellaneous) equal to 10% of the household budget. These households are often called the "working poor," referring to the fact that people in these households have jobs but still remain at or near the poverty level.

Household Survival Budget Calculator for Wisconsin in 2023, United for ALICE; Household Stability Budget Calculator for Wisconsin in 2023, United for ALICE

Impact of Housing on Health & Wellbeing

Safe, affordable, and **adequate** housing is essential for health and well-being because it provides stability, security, and a healthy environment for individuals and families. Additionally, stable housing promotes mental health by reducing stress and anxiety associated with housing insecurity or homelessness. By ensuring access to quality housing, communities can support healthier lifestyles, improve social and economic stability, and reduce health disparities.

Safe Housing: Enviornmental Factors

Radon, a naturally occurring gas that is radioactive and can cause lung cancer, is present in the Appleton area. The goal is that every home in Appleton has been tested for radon and has a mitigation system if warranted. The local county health departments provide radon testing kits for as little at \$5 a kit.

Blood Lead Poisoning

The current definition of blood lead poisoning (elevated levels) is 3.5 micrograms per deciliter. In 2022, the definition was at 5.0 micrograms per deciliter. The following cases are all blood venous levels only for children ages 5 and under:

City of Appleton's Health Department's Annual Reports

Safe

Safe housing is a stable, structurally sound living environment that protects residents from hazards such as violence, toxins, extreme weather, and health risks while ensuring access to essential utilities and sanitation.

Affordable housing is housing that costs no more than 30% of a household's income.

Adequate

Adequate housing meets the needs of the family who occupies it, having sufficient space to prevent overcrowding, clean water and sanitation, is accessible for all household members, and is proximal to essential services like jobs, school, healthcare, and transportation.

Units & Occupancy

A market study completed by the City of Appleton's Housing Task Force (2022) demonstrated that the City would "need to deliver approximately 3,000 housing units between 2020 and 2030, or approximately 300 units annually, to accommodate the current needs of the community and it's projected future growth.

City of Appleton's Housing Development Policy Guide, 2024

Barriers to Renting

Barriers that keep people from being able to rent:

- Prior Evictions
- Poor Credit History
- High Costs of Housing and Low Wages
- Raising Costs of Housing and Fixed Incomes
- Lack of Enough Affordable Housing
- Lack of Enough Supportive Housing Programs
- Long Waitlists for Apartments and Supportive Housing Units
- Complex Requirements or Processes to enter Apartments or Supportive Housing Units
- Locational Challenges (specifically related to Transportation Issues or School District Needs)
- Demand for Accessible Housing is higher than the Current Quantity
- Language Barriers

In Wisconsin, evictions can stay on record with the courts for twenty years, which can be used by landlords to deny rental applications.

Wisconsin Watch

The following demonstrates the percentage of households in Appleton who have housing costs greater than or equal to 30 percent of their monthly income.

As I am about to turn 77, I have many concerns regarding affordable and senior living, meaning less than \$1000 a month!

-Community Concerns Survey Participant -

I have many friends of various ages who qualify for low or moderate income housing. Wait lists are way too long. If we didn't own our condo, paying the very high "market rate" housing of the newer apartments downtown would threaten our future finances. -Community Concerns Survey Participant

> Housing costs in the Fox Valley as a whole are increasing at an alarming rate. These costs are quickly turning two income households

> into two plus income households to comfortably afford basic lifestyles. -Community Concerns Survey Participant

Too expensive to rent and if you don't have a perfect credit you can't buy a house either.

-Community Concerns Survey Participant

Î My rent is 80% of my income. -Community Concerns Survey Participant

only of Community Concerns survey respondents agree that Appleton has Safe & Affordable **Housing Options**

Homelessness

What Consists of "Homelessness"?

Living in an "uninhabitable" place like an abandoned building or outside in a car, a tent, under a bridge, in the woods, in a park, etc. The PIT Count captures the number of individuals living like this twice a year.

Temporarily staying in a **hotel**, **hospital**, **jail**, "**couch-surfing**," **doubled-up**, **staying with family or friends**, etc. and having nowhere stable to go after. It is unknown how many people in Appleton are living this way.

Appleton has two **emergency shelters** (Pillars Adult Shelter and Pillars Adult/Family Shelter) and one **domestic violence shelter** (Harbor House)

Fox Cities Point in Time Count data

Physical Environment

Did you know?

The source of
Appleton's drinking
water is Lake
Winnebago. Lake
Winnebago is in the Fox
and Wolf River
watersheds.

Drinking Water

The Appleton Water Treatment Facility treats Lake Winnebago water with a multiple-step process that deactivates and destroys illness-causing microorganisms while removing other contaminants.

The water is lime softened and filtered through granular activated carbon for turbidity removal. Ultraviolet Light is used as a disinfection process for Cryptosporidium. Fluoride is added for dental health. Finally, chlorine disinfection provides safe, drinking water throughout the distribution system and to your faucets.

Wisconsin Environmental Public Health Tracking Program

Why fluoride?

Fluoride reduces cavities

Fluoride

The CDC named fluoridation of drinking water one of 10 great public health interventions of the 20th century because of the dramatic decline in cavities since community water fluoridation started in 1945. According to the CDC, community water fluoridation is a cornerstone strategy for prevention of cavities in the U.S. It is a practical, cost-

effective, and equitable way for communities to improve their residents' oral health regardless of age, education, or income. https://www.cdc.gov/fluoridation/about/index.html

Transportation

Car Ownership

The majority of people in Appleton use a personal vehicle to commute to work, along with doing everyday errands. However, locally, statewide and nationally, the percentage of workers who commute via personal vehicle has declined over the past five years. This is likely due to the increase in virtual working options.

"This is a must-have car place." -Community Concerns survey participant

do NOT think transportation is readily available to people of all ages and abilities in Appleton.

American Community Survey

Public Transportation

Valley Transit partners with 9 municipalities, 3 counties and many other entities to provide diverse transportation services across the Fox Cities area. There are 18 routes. In addition, the **VT Connector** is a fully accessible shared-ride van service designed to supplement Valley Transit's bus service. In the past few years, Valley Transit has struggled to fill bus driver positions, which has led to a decrease in bus times and routes.

"Public transportation is woeful. We need a massive investment in buses and trains." -Community Concerns survey participant

Pedestrian Traffic

"Some of the sidewalks are uneven; I use a walker and the sidewalks sometimes can be a hazard for me."

-Community Concerns survey participant

8 out of 10 Community Concerns survey respondents

think Appleton is bikeable, walkable, and/or wheelable.

Childcare Expenses

The cost of childcare is increasing. In the past two years, families with two children in childcare in the Appleton area have been spending around 30% of their median household income on childcare costs.

Childcare Cost Burdens

This represents the percentage of a family's median household income they are spending on childcare costs for two children.

"Childcare prices are out of control. My kids only go to a daycare center two days a week because it's all we can afford and it's \$304 a week, which is outrageous. My husband and I both have good paying jobs (over \$30/hour) but we still struggle to make ends meet because of the prices of childcare and inflation. My husband went down to working four days a week because it was more cost effective for him to work one day less a week than us adding a third day of daycare per week."

-Community Concerns survey participant

Education Access & Quality

When asked if

"Quality childcare is available and affordable"

Aareed

Quality Education

Quality education, in the context of public health, means that everyone has access to a safe and supportive learning environment, skilled teachers, and the resources they need to develop knowledge and skills for a healthy life. It helps people make informed choices about their health, find good jobs, and contribute to their communities, leading to better overall well-being.

Here are key factors that impact the quality of education:

Funding & Resources

Schools need proper funding for books, technology, safe buildings, and learning materials.

Curriculum & Teaching Methods Up-to-date, engaging, and culturally relevant teaching improves

education quality.

Student Health & Nutrition

Healthy students (physically and mentally) learn better.

Qualified Teachers

Well-trained, motivated teachers

Technology & Internet Access Digital tools and internet access expand learning opportunities.

improve student learning outcomes.

Safe & Inclusive Environment Schools should be free from violence, discrimination, and bullying.

Family & Community Support

Parental involvement and community programs enhance learning.

Access to Early Childhood Education Strong early learning experiences set the foundation for future success.

Class Size

Smaller classes allow more individual attention and better learning experiences.

Education Policies & Leadership Strong policies and leadership ensure high standards and continuous improvement.

Education Access & Quality

Social Connectedness

What is Social Connectedness?

Social connectedness is vital for public health because it improves mental and physical well-being, reduces stress, and encourages healthier behaviors. Strong relationships and supportive communities lead to better health outcomes, faster recovery from illness, and greater resilience in times of crisis. Public health promotes social connectedness to reduce isolation and create healthier, safer communities.

Belonging

Belonging refers to the sense of being accepted, valued, and connected within a community or social group. It is a key social determinant of health, influencing mental well-being, stress levels, and overall health outcomes.

of Community Concerns survey participants

feel they belong in their community

Social Vulnerability Index

The Social Vulnerability Index (SVI) value indicates the relative vulnerability of every U.S. Census tract by ranking tracts on 16 social factors. The SVI value is a percentile rank (ranging from 0 to 1), with higher values indicating greater vulnerability. For example, an SVI rank of 0.85 indicates that 85% of tracts in the nation experience social vulnerability equal to or lower than the tract of interest.

Isolation & Loneliness

Social isolation is when a person does not have relationships or contact with others and has little to no social support.

CDC Social Connectedness

17% of Community Concerns survey respondents feel isolated from others 沒有

18% of Community Concerns survey respondents feel left out

20%
of Community Concerns
survey respondents
lack companionship

the Mind Your Wellness Survey reported that people who report always feeling isolated are:

- More likely to be experiencing chronic pain
- More likely to have income less than \$150,000 annually
- 49 times more likely to have symptoms of anxiety
- 17 times more likely to have symptoms of depression
- Less likely to have children

"Social isolation can pose a health risk to people, even if they don't feel lonely."

CDC, Social Connectedness

Loneliness is feeling alone or disconnected from others. It is feeling like you do not have meaningful or close relationships or a sense of belonging. It reflects the difference between a person's actual and desired level of connection.

CDC Social Connectedness

"Even a person with a lot of friends can feel lonely."

CDC, Social Connectedness

Did you know?

Loneliness and social isolation may be shaped by conditions in the environments where people are born, live, work, learn, worship, and play. These conditions can affect the ability to connect socially. For example, the availability of resources that exist in a community, such as parks, libraries, public transportation, and programs, support the development of social connection.

CDC, Social Connectedness

Economic Cost of Social Connectedness

Social disconnectedness increases healthcare costs due to higher rates of mental illness, chronic disease, and premature mortality. It also reduces workplace productivity and economic growth as isolated individuals are more likely to experience stress, absenteeism, and unemployment. These factors create a significant financial burden on healthcare systems, businesses, and society as a whole.

"Many of the events are family-focused with narrow definition of what 'family' is: all related by blood, straight, with two kids." -Imagine Fox Cities Participant

"We need more affordable/free cultural events that aren't drunk fests."

"The quality of life is lowering as the wealth gap increases between community members."

"You can't enjoy all of Appleton when you can't afford to participate.... It's not inflation it's profit over people and incredibly obvious. That's what causes frustration and issues with feeling fulfilled."

-Community Concerns Survey participants

Discrimination

Discrimination has serious consequences for a person's overall health and well-being, affecting both physical and mental health. Chronic exposure to discrimination increases stress, leading to higher risks of anxiety, depression, and even post-traumatic stress disorder (PTSD). Physically, prolonged stress can contribute to conditions like high blood pressure, heart disease, and weakened immune function. Discrimination also creates barriers to healthcare, as individuals may avoid seeking medical treatment due to fear of mistreatment or receive lower-quality care due to bias in the healthcare system. Socially and economically, discrimination limits access to education, job opportunities, and financial stability, which in turn affects long-term well-being.

Health Disparities by Race

Firearm Injuries and Deaths

Firearm injuries and deaths continue to be a significant public health problem in the United States. According to the CDC, while firearm violence and injury affects people in all communities, some groups have higher rates of firearm injury than others.

Firearm Homicide Rates are highest among teens & young adults ages 15-34 Firearm Suicide Rates are highest among adults aged 75 and older

People who survive a firearm-related injury may experience long-term consequences. These include problems with memory, thinking, emotions, physical disability from injury to the brain, and paralysis from spinal cord injuries. Also included are chronic mental health problems from conditions such as post-traumatic stress disorder.

CDC Firearm Injury and Death Prevention

Access to Care

Access To Care

Healthcare access means being able to get medical care when it is needed, without too many barriers like cost, distance, or long wait times. It includes having doctors nearby, affordable services, and insurance or programs that help cover costs.

Quality of Care

Quality of healthcare means getting the right care at the right time to stay healthy or get better. It includes safe treatments, skilled doctors, and services that meet patients' needs and comfort level without mistakes or delays.

Both access to and quality of care are crucial to public health. If individuals are unable to access care they feel comfortable going to and can afford, the ailments they suffer have a greater impact on the community as a whole.

72%

Quality of Mental Health Care

Mental health care quality can be poor when there aren't enough trained professionals specific to the needs of the area, treatments don't match people's needs, or care is rushed. Other issues include misdiagnosis, lack of follow-up support, and systems that focus more on quick fixes than long-term well-being.

of Community Concerns
Survey participants say they
know where to locate
mental health resources
if needed

When asked if they feel like having an opportunity to access a provider who looks like them or has a shared identity with them would increase their trust in accessing health care, Community Concerns Survey participants had very differing views.

In total, 54% agreed with the statement, saying it is important for them to have a provider who looks like or has a shared identity as they do. However, those who agreed in the statement disagreed on if this is important or not. The majority reported a shared identity with their provider is important.

Access to Insurance

About 1 in 10 people in the United States don't have health insurance. People without insurance are less likely to have a primary care provider, and they may not be able to afford the health care services and medications they need.

Next Steps

Tri-County CHIC

Where do we go from here?

From now on, we will work with the Tri-County Community Health Improvement Coalition (CHIC) to complete a more intensive Community Health Assessment and Community Health Improvement Plan.

All five local public health agencies, four area health systems, and numerous diverse community organizations have come together with a shared purpose: to improve health and well-being for every individual in our communities. This isn't just about identifying a priority—it's about committing to action. Our collective focus on health and well-being means the community can expect real, meaningful change. This collaborative effort is more than an assessment—it's a promise.

A promise that we will invest our time, energy, and resources to create a community that is responsive, inclusive, and lasting. We know this work takes time. It requires listening, relationship-building, and trust. It means working through challenges and designing solutions, all of which we have begun doing together. But the reward is worth it: a future where health and well-being is not an afterthought but a foundation of the work in each of our organizations.

The following is an example of the advertisements for the Community Concerns Survey.

I hope you take the survey: "So the city can better understand how to better meet the needs of its community."

One area I see opportunity is:

"The concerns I mentioned in my responses aren't areas the city have the ability to address, e.g. the cost of health care and groceries."

Dennetra Williams & her daughter Peyton
